

LAKESIDE MOLECULAR PATHOLOGY

Surgical Pathology Report

Patient ID	SUBJ001
Study ID	KLIN-ONC-DEMO-001
Accession	PATH-001-SCR
Specimen received	24-Dec-2025
Report date	24-Dec-2025
Specimen	Right upper lobe lung mass core biopsy
Ordering physician	Investigator, Oncology Site

Final Diagnosis

Non-small cell carcinoma, adenocarcinoma type, compatible with lung primary

Microscopic Description

Sections show malignant epithelial neoplasm involving submitted tissue. Tumor is present in multiple cores. Necrosis and desmoplastic stromal response are identified where applicable.

Immunohistochemistry / Ancillary Studies

TTF-1 positive; Napsin A positive; p40 negative

Clinical Trial Eligibility Comment

Histology confirmation: Yes. Diagnosis: Metastatic non-small cell lung cancer. Stage: IV. PD-L1 TPS 35%; tumor cellularity adequate.

Extraction target for demo

Expected extraction: subject_id, diagnosis, histology confirmed flag, specimen type, report date, pathology accession, stage/primary tumor context. Maps primarily to DM and screening eligibility evidence.
