

LAKE SIDE MOLECULAR PATHOLOGY

Surgical Pathology Report

Patient ID	SUBJ003
Study ID	KLIN-ONC-DEMO-001
Accession	PATH-003-SCR
Specimen received	27-Dec-2025
Report date	27-Dec-2025
Specimen	Transurethral bladder tumor specimen and metastatic site review
Ordering physician	Investigator, Oncology Site

Final Diagnosis

High-grade urothelial carcinoma with metastatic involvement

Microscopic Description

Sections show malignant epithelial neoplasm involving submitted tissue. Tumor is present in multiple cores. Necrosis and desmoplastic stromal response are identified where applicable.

Immunohistochemistry / Ancillary Studies

GATA3 positive; p63 positive; CK7 positive

Clinical Trial Eligibility Comment

Histology confirmation: Yes. Diagnosis: Metastatic urothelial carcinoma. Stage: IV. Representative FFPE block available.

Extraction target for demo

Expected extraction: subject_id, diagnosis, histology confirmed flag, specimen type, report date, pathology accession, stage/primary tumor context. Maps primarily to DM and screening eligibility evidence.
