

LAKE SIDE MOLECULAR PATHOLOGY

Surgical Pathology Report

Patient ID	SUBJ005
Study ID	KLIN-ONC-DEMO-001
Accession	PATH-005-SCR
Specimen received	31-Dec-2025
Report date	31-Dec-2025
Specimen	Pancreatic head mass fine needle biopsy
Ordering physician	Investigator, Oncology Site

Final Diagnosis

Pancreatic ductal adenocarcinoma, moderately differentiated

Microscopic Description

Sections show malignant epithelial neoplasm involving submitted tissue. Tumor is present in multiple cores. Necrosis and desmoplastic stromal response are identified where applicable.

Immunohistochemistry / Ancillary Studies

CK7 positive; SMAD4 loss by IHC

Clinical Trial Eligibility Comment

Histology confirmation: Yes. Diagnosis: Metastatic pancreatic adenocarcinoma. Stage: IV. FFPE block suitable for central testing.

Extraction target for demo

Expected extraction: subject_id, diagnosis, histology confirmed flag, specimen type, report date, pathology accession, stage/primary tumor context. Maps primarily to DM and screening eligibility evidence.
